The above chart reflects a hypothetical \$100,000 investment made at inception with no additional trading and all dividends reinvested. The product changed its investment mandate in April 2009. Past performance is no guarantee of future results or trends. The performance returns for Investment Strategies included in the Unified Managed Account ("UMA") Program are based upon monthly composite returns of accounts that were open and invested in the recommended Investment Strategy for the entire month. The composite excludes accounts that: (i) had a contribution or withdrawal during a month greater than 10% of the market value of the account, (ii) had more than 3% in cash during the month, (iii) had client specified investment restrictions or (iv) utilized a customized tax transition investment approach. Detailed information regarding the Investment Strategy composite is available upon request. The composite returns are based on actual market values and are weighted accordingly. All calculations reflect the deduction of the internal management fees and expenses of any mutual funds or ETFs included in the accounts. Generally, a higher percentage of smaller UMA accounts will be invested in funds rather than allocated to separate account managers in order to obtain greater diversification among asset classes and investment styles. Since Brinker Capital retains full discretion to add or replace managers and funds in which the account is invested and to change the allocation among such managers and/or funds, the historical performance of the recommended Investment Strategy may reflect the performance of managers and funds which are no longer included in the recommended Investment Strategy. Furthermore, past performance of the managers and funds included in the recommended Investment Strategy is not a guarantee of future results or trends.

Standard Deviation: A statistical measure of volatility indicates the "risk" associated with a return series. The lower the number the less volatility. **Returns are calculated gross (before the deduction) of advisory fees payable to Brinker Capital and any other expenses for services not covered by the advisory fee including administrative costs, which would reduce your return.** Brinker Capital's fee does not include the internal management fees and operating expenses of mutual funds in which a client's account is invested, which are reflected in the performance information contained herein. Brinker Capital's fees are disclosed in Part 2A of its Form ADV. The net effect of the deduction of Brinker Capital's fees on annualized performance, including the compounded effect over time, is determined by the relative size of the fee and the account's investment performance. The chart to the right depicts the effect of a 1% management fee on the growth of one dollar over a ten year period at 10% (9% after fees), 5% (4% after fees) and 3% (2% after fees) assumed rates of return. Looked at another way, \$10,000.00 invested at 10% for ten years would grow to \$25,937.42; at 9% it would grow to \$23,673.64.

As a strategist, Brinker Capital creates and updates a model portfolio utilizing various mutual funds, exchange traded funds or stocks and delivers the model portfolio to platforms for implementation. Your account may not contain certain securities due to their availability and substitute securities will be selected at Brinker Capital's discretion. All investments involve risk including loss of principal. Foreign securities involve additional risks, including foreign currency changes, political risks, foreign taxes, and different methods of accounting and financial reporting. Fixed income investments are subject to interest rate and credit risks. Alternative investment strategies are speculative, not suitable for all clients, and intended for experienced and sophisticated investors who are willing to bear the high economic risks of the investment. Mutual fund and exchange traded fund (ETF) performance information is based upon published performance of the mutual funds or ETFs, which must be calculated by the funds in accordance with rules and regulations promulgated by the Securities and Exchange Commission.

Indices: Figures for the indices reflect the reinvestment of dividends but do not reflect any management fees, transaction costs or expenses, which would reduce returns. Indices are unmanaged and an investor cannot invest directly in an index. **Russell 3000:** A market capitalization weighted equity index maintained by the Russell Investment Group that seeks to be a benchmark of the entire U.S. stock market. This index encompasses the 3,000 largest U.S.-traded stocks, in which the underlying companies are all incorporated in the U.S. **MSCI All Country World Index Ex USA:** A market-capitalization-weighted index maintained by MSCI Inc. and designed to provide a broad measure of stock performance throughout the world, with the exception of U.S.-based companies. The MSCI All Country World Index Ex-U.S. includes both developed and emerging markets. **Bloomberg Barclays U.S. Aggregate:** A market capitalization-weighted index, maintained by Bloomberg Barclays, and is often used to represent investment grade bonds being traded in United States. **HFRX Global Hedge Fund Index (USD):** An asset weighted index comprised of all eligible hedge fund strategies, designed to be representative of the overall composition of the hedge fund universe.

All calculations reflect the deduction of the internal management fees and expenses of any mutual funds or ETFs included in the accounts. Generally, a higher percentage of smaller UMA accounts will be invested in funds rather than allocated to separate account managers in order to obtain greater diversification among asset classes and investment styles. Since Brinker Capital retains full discretion to add or replace managers and funds in which the account is invested and to change the allocation among such managers and/or funds, the historical performance of the recommended Investment Strategy may reflect the performance of managers and funds which are no longer included in the recommended Investment Strategy. Furthermore, past performance of the managers and funds included in the recommended Investment Strategy is not a guarantee of future results or trends.

Standard Deviation: A statistical measure of volatility indicates the "risk" associated with a return series. The lower the number the less volatility. **Returns are calculated gross (before the deduction) of advisory fees payable to Brinker Capital and any other expenses for services not covered by the advisory fee including administrative costs, which would reduce your return.** Brinker Capital's fee does not include the internal management fees and operating expenses of mutual funds in which a client's account is invested, which are reflected in the performance information contained herein. Brinker Capital's fees are disclosed in Part 2A of its Form ADV. The net effect of the deduction of Brinker Capital's fees on annualized performance, including the compounded effect over time, is determined by the relative size of the fee and the account's investment performance. The chart to the right depicts the effect of a 1% management fee on the growth of one dollar over a ten year period at 10% (9% after fees), 5% (4% after fees) and 3% (2% after fees) assumed rates of return. Looked at another way, \$10,000.00 invested at 10% for ten years would grow to \$25,937.42; at 9% it would grow to \$23,673.64.

As a strategist, Brinker Capital creates and updates a model portfolio utilizing various mutual funds, exchange traded funds or stocks and delivers the model portfolio to platforms for implementation. Your account may not contain certain securities due to their availability and substitute securities will be selected at Brinker Capital's discretion. All investments involve risk including loss of principal. Foreign securities involve additional risks, including foreign currency changes, political risks, foreign taxes, and different methods of accounting and financial reporting. Fixed income investments are subject to interest rate and credit risks. Alternative investment strategies are speculative, not suitable for all clients, and intended for experienced and sophisticated investors who are willing to bear the high economic risks of the investment. Mutual fund and exchange traded fund (ETF) performance information is based upon published performance of the mutual funds or ETFs, which must be calculated by the funds in accordance with rules and regulations promulgated by the Securities and Exchange Commission.

Indices: Figures for the indices reflect the reinvestment of dividends but do not reflect any management fees, transaction costs or expenses, which would reduce returns. Indices are unmanaged and an investor cannot invest directly in an index. **Russell 3000:** A market capitalization weighted equity index maintained by the Russell Investment Group that seeks to be a benchmark of the entire U.S. stock market. This index encompasses the 3,000 largest U.S.-traded stocks, in which the underlying companies are all incorporated in the U.S. **MSCI All Country World Index Ex USA:** A market-capitalization-weighted index maintained by MSCI Inc. and designed to provide a broad measure of stock performance throughout the world, with the exception of U.S.-based companies. The MSCI All Country World Index Ex-U.S. includes both developed and emerging markets. **Bloomberg Barclays U.S. Aggregate:** A market capitalization-weighted index, maintained by Bloomberg Barclays, and is often used to represent investment grade bonds being traded in United States. **HFRX Global Hedge Fund Index (USD):** An asset weighted index comprised of all eligible hedge fund strategies, designed to be representative of the overall composition of the hedge fund universe.

The above chart reflects a hypothetical \$100,000 investment made at inception with no additional trading and all dividends reinvested. The product changed its investment mandate in April 2009. Past performance is no guarantee of future results or trends. The performance returns for Investment Strategies included in the Unified Managed Account ("UMA") Program are based upon monthly composite returns of accounts that were open and invested in the recommended Investment Strategy for the entire month. The composite excludes accounts that: (i) had a contribution or withdrawal during a month greater than 10% of the market value of the account, (ii) had more than 3% in cash during the month, (iii) had client specified investment restrictions or (iv) utilized a customized tax transition investment approach. Detailed information regarding the Investment Strategy composite is available upon request. The composite returns are based on actual market values and are weighted accordingly. All calculations reflect the deduction of the internal management fees and expenses of any mutual funds or ETFs included in the accounts. Generally, a higher percentage of smaller UMA accounts will be invested in funds rather than allocated to separate account managers in order to obtain greater diversification among asset classes and investment styles. Since Brinker Capital retains full discretion to add or replace managers and funds in which the account is invested and to change the allocation among such managers and/or funds, the historical performance of the recommended Investment Strategy may reflect the performance of managers and funds which are no longer included in the recommended Investment Strategy. Furthermore, past performance of the managers and funds included in the recommended Investment Strategy is not a guarantee of future results or trends.

Standard Deviation: A statistical measure of volatility indicates the "risk" associated with a return series. The lower the number the less volatility. **Returns are calculated gross (before the deduction) of advisory fees payable to Brinker Capital and any other expenses for services not covered by the advisory fee including administrative costs, which would reduce your return.** Brinker Capital's fee does not include the internal management fees and operating expenses of mutual funds in which a client's account is invested, which are reflected in the performance information contained herein. Brinker Capital's fees are disclosed in Part 2A of its Form ADV. The net effect of the deduction of Brinker Capital's fees on annualized performance, including the compounded effect over time, is determined by the relative size of the fee and the account's investment performance. The chart to the right depicts the effect of a 1% management fee on the growth of one dollar over a ten year period at 10% (9% after fees), 5% (4% after fees) and 3% (2% after fees) assumed rates of return. Looked at another way, \$10,000.00 invested at 10% for ten years would grow to \$25,937.42; at 9% it would grow to \$23,673.64.

As a strategist, Brinker Capital creates and updates a model portfolio utilizing various mutual funds, exchange traded funds or stocks and delivers the model portfolio to platforms for implementation. Your account may not contain certain securities due to their availability and substitute securities will be selected at Brinker Capital's discretion. All investments involve risk including loss of principal. Foreign securities involve additional risks, including foreign currency changes, political risks, foreign taxes, and different methods of accounting and financial reporting. Fixed income investments are subject to interest rate and credit risks. Alternative investment strategies are speculative, not suitable for all clients, and intended for experienced and sophisticated investors who are willing to bear the high economic risks of the investment. Mutual fund and exchange traded fund (ETF) performance information is based upon published performance of the mutual funds or ETFs, which must be calculated by the funds in accordance with rules and regulations promulgated by the Securities and Exchange Commission.

Indices: Figures for the indices reflect the reinvestment of dividends but do not reflect any management fees, transaction costs or expenses, which would reduce returns. Indices are unmanaged and an investor cannot invest directly in an index. **Russell 3000:** A market capitalization weighted equity index maintained by the Russell Investment Group that seeks to be a benchmark of the entire U.S. stock market. This index encompasses the 3,000 largest U.S.-traded stocks, in which the underlying companies are all incorporated in the U.S. **MSCI All Country World Index Ex USA:** A market-capitalization-weighted index maintained by MSCI Inc. and designed to provide a broad measure of stock performance throughout the world, with the exception of U.S.-based companies. The above chart reflects a hypothetical \$100,000 investment made at inception with no additional trading and all dividends reinvested. The product changed its investment mandate in April 2009. Past performance is no guarantee of future results or trends. The performance returns for Investment Strategies included in the Unified Managed Account ("UMA") Program are based upon monthly composite returns of accounts that were open and invested in the recommended Investment Strategy for the entire month. The composite excludes accounts that: (i) had a contribution or withdrawal during a month greater than 10% of the market value of the account, (ii) had more than 3% in cash during the month, (iii) had client specified investment restrictions or (iv) utilized a customized tax transition investment approach. Detailed information regarding the Investment Strategy composite is available upon request. The composite returns are based on actual market values and are weighted accordingly. All calculations reflect the deduction of the internal management fees and expenses of any mutual funds or ETFs included in the accounts. Generally, a higher percentage of smaller UMA accounts will be invested in funds rather than allocated to separate account managers in order to obtain greater diversification among asset classes and investment styles. Since Brinker Capital retains full discretion to add or replace managers and funds in which the account is invested and to change the allocation among such managers and/or funds, the historical performance of the recommended Investment Strategy may reflect the performance of managers and funds which are no longer included in the recommended Investment Strategy. Furthermore, past performance of the managers and funds included in the recommended Investment Strategy is not a guarantee of future results or trends.

Standard Deviation: A statistical measure of volatility indicates the "risk" associated with a return series. The lower the number the less volatility. **Returns are calculated gross (before the deduction) of advisory fees payable to Brinker Capital and any other expenses for services not covered by the advisory fee including administrative costs, which would reduce your return.** Brinker Capital's fee does not include the internal management fees and operating expenses of mutual funds in which a client's account is invested, which are reflected in the performance information contained herein. Brinker Capital's fees are disclosed in Part 2A of its Form ADV. The net effect of the deduction of Brinker Capital's fees on annualized performance, including the compounded effect over time, is determined by the relative size of the fee and the account's investment performance. The chart to the right depicts the effect of a 1% management fee on the growth of one dollar over a ten year period at 10% (9% after fees), 5% (4% after fees) and 3% (2% after fees) assumed rates of return. Looked at another way, \$10,000.00 invested at 10% for ten years would grow to \$25,937.42; at 9% it would grow to \$23,673.64.

As a strategist, Brinker Capital creates and updates a model portfolio utilizing various mutual funds, exchange traded funds or stocks and delivers the model portfolio to platforms for implementation. Your account may not contain certain securities due to their availability and substitute securities will be selected at Brinker Capital's discretion. All investments involve risk including loss of principal. Foreign securities involve additional risks, including foreign currency changes, political risks, foreign taxes, and different methods of accounting and financial reporting. Fixed income investments are subject to interest rate and credit risks. Alternative investment strategies are speculative, not suitable for all clients, and intended for experienced and sophisticated investors who are willing to bear the high economic risks of the investment. Mutual fund and exchange traded fund (ETF) performance information is based upon published performance of the mutual funds or ETFs, which must be calculated by the funds in accordance with rules and regulations promulgated by the Securities and Exchange Commission.

Indices: Figures for the indices reflect the reinvestment of dividends but do not reflect any management fees, transaction costs or expenses, which would reduce returns. Indices are unmanaged and an investor cannot invest directly in an index. **Russell 3000:** A market capitalization weighted equity index maintained by the Russell Investment Group that seeks to be a benchmark of the entire U.S. stock market. This index encompasses the 3,000 largest U.S.-traded stocks, in which the underlying companies are all incorporated in the U.S. **MSCI All Country World Index Ex USA:** A market-capitalization-weighted index maintained by MSCI Inc. and designed to provide a broad measure of stock performance throughout the world, with the exception of U.S.-based companies. The MSCI All Country World Index Ex-U.S. includes both developed and emerging markets. **Bloomberg Barclays U.S. Aggregate:** A market capitalization-weighted index, maintained by Bloomberg Barclays, and is often used to represent investment grade bonds being traded in United States. **HFRX Global Hedge Fund Index (USD):** An asset weighted index comprised of all eligible hedge fund strategies, designed to be representative of the overall composition of the hedge fund universe.

Brinker Capital's fees are disclosed in Part 2A of its Form ADV. The net effect of the deduction of Brinker Capital's fees on annualized performance, including the compounded effect over time, is determined by the relative size of the fee and the account's investment performance. The chart to the right depicts the effect of a 1% management fee on the growth of one dollar over a ten year period at 10% (9% after fees), 5% (4% after fees) and 3% (2% after fees) assumed rates of return. Looked at another way, \$10,000.00 invested at 10% for ten years would grow to \$25,937.42; at 9% it would grow to \$23,673.64.

As a strategist, Brinker Capital creates and updates a model portfolio utilizing various mutual funds, exchange traded funds or stocks and delivers the model portfolio to platforms for implementation. Your account may not contain certain securities due to their availability and substitute securities will be selected at Brinker Capital's discretion. All investments involve risk including loss of principal. Foreign securities involve additional risks, including foreign currency changes, political risks, foreign taxes, and different methods of accounting and financial reporting. Fixed income investments are subject to interest rate and credit risks. Alternative investment strategies are speculative, not suitable for all clients, and intended for experienced and sophisticated investors who are willing to bear the high economic risks of the investment. Mutual fund and exchange traded fund (ETF) performance information is based upon published performance of the mutual funds or ETFs, which must be calculated by the funds in accordance with rules and regulations promulgated by the Securities and Exchange Commission.

Indices: Figures for the indices reflect the reinvestment of dividends but do not reflect any management fees, transaction costs or expenses, which would reduce returns. Indices are unmanaged and an investor cannot invest directly in an index. **Russell 3000:** A market capitalization weighted equity index maintained by the Russell Investment Group that seeks to be a benchmark of the entire U.S. stock market. This index encompasses the 3,000 largest U.S.-traded stocks, in which the underlying companies are all incorporated in the U.S. **MSCI All Country World Index Ex USA:** A market-capitalization-weighted index maintained by MSCI Inc. and designed to provide a broad measure of stock performance throughout the world, with the exception of U.S.-based companies. The MSCI All Country World Index Ex-U.S. includes both developed and emerging markets. **Bloomberg Barclays U.S. Aggregate:** A market capitalization-weighted index, maintained by Bloomberg Barclays, and is often used to represent investment grade bonds being traded in United States. **HFRX Global Hedge Fund Index (USD):** An asset weighted index comprised of all eligible hedge fund strategies, designed to be representative of the overall composition of the hedge fund universe.

The above chart reflects a hypothetical \$100,000 investment made at inception with no additional trading and all dividends reinvested. The product changed its investment mandate in April 2009. Past performance is no guarantee of future results or trends. The performance returns for Investment Strategies included in the Unified Managed Account ("UMA") Program are based upon monthly composite returns of accounts that were open and invested in the recommended Investment Strategy for the entire month. The composite excludes accounts that: (i) had a contribution or withdrawal during a month greater than 10% of the market value of the account, (ii) had more than 3% in cash during the month, (iii) had client specified investment restrictions or (iv) utilized a customized tax transition investment approach. Detailed information regarding the Investment Strategy composite is available upon request. The composite returns are based on actual market values and are weighted accordingly. All calculations reflect the deduction of the internal management fees and expenses of any mutual funds or ETFs included in the accounts. Generally, a higher percentage of smaller UMA accounts will be invested in funds rather than allocated to separate account managers in order to obtain greater diversification among asset classes and investment styles. Since Brinker Capital retains full discretion to add or replace managers and funds in which the account is invested and to change the allocation among such managers and/or funds, the historical performance of the recommended Investment Strategy may reflect the performance of managers and funds which are no longer included in the recommended Investment Strategy. Furthermore, past performance of the managers and funds included in the recommended Investment Strategy is not a guarantee of future results or trends.

Standard Deviation: A statistical measure of volatility indicates the "risk" associated with a return series. The lower the number the less volatility. **Returns are calculated gross (before the deduction) of advisory fees payable to Brinker Capital and any other expenses for services not covered by the advisory fee including administrative costs, which would reduce your return.** Brinker Capital's fee does not include the internal management fees and operating expenses of mutual funds in which a client's account is invested, which are reflected in the performance information contained herein. Brinker Capital's fees are disclosed in Part 2A of its Form ADV. The net effect of the deduction of Brinker Capital's fees on annualized performance, including the compounded effect over time, is determined by the relative size of the fee and the account's investment performance. The chart to the right depicts the effect of a 1% management fee on the growth of one dollar over a ten year period at 10% (9% after fees), 5% (4% after fees) and 3% (2% after fees) assumed rates of return. Looked at another way, \$10,000.00 invested at 10% for ten years would grow to \$25,937.42; at 9% it would grow to \$23,673.64.

As a strategist, Brinker Capital creates and updates a model portfolio utilizing various mutual funds, exchange traded funds or stocks and delivers the model portfolio to platforms for implementation. Your account may not contain certain securities due to their availability and substitute securities will be selected at Brinker Capital's discretion. All investments involve risk including loss of principal. Foreign securities involve additional risks, including foreign currency changes, political risks, foreign taxes, and different methods of accounting and financial reporting. Fixed income investments are subject to interest rate and credit risks. Alternative investment strategies are speculative, not suitable for all clients, and intended for experienced and sophisticated investors who are willing to bear the high economic risks of the investment. Mutual fund and exchange traded fund (ETF) performance information is based upon published performance of the mutual funds or ETFs, which must be calculated by the funds in accordance with rules and regulations promulgated by the Securities and Exchange Commission.

The above chart reflects a hypothetical \$100,000 investment made at inception with no additional trading and all dividends reinvested. The product changed its investment mandate in April 2009. Past performance is no guarantee of future results or trends. The performance returns for Investment Strategies included in the Unified Managed Account ("UMA") Program are based upon monthly composite returns of accounts that were open and invested in the recommended Investment Strategy for the entire month. The composite excludes accounts that: (i) had a contribution or withdrawal during a month greater than 10% of the market value of the account, (ii) had more than 3% in cash during the month, (iii) had client specified investment restrictions or (iv) utilized a customized tax transition investment approach. Detailed information regarding the Investment Strategy composite is available upon request. The composite returns are based on actual market values and are weighted accordingly. All calculations reflect the deduction of the internal management fees and expenses of any mutual funds or ETFs included in the accounts. Generally, a higher percentage of smaller UMA accounts will be invested in funds rather than allocated to separate account managers in order to obtain greater diversification among asset classes and investment styles. Since Brinker Capital retains full discretion to add or replace managers and funds in which the account is invested and to change the allocation among such managers and/or funds, the historical performance of the recommended Investment Strategy may reflect the performance of managers and funds which are no longer included in the recommended Investment Strategy. Furthermore, past performance of the managers and funds included in the recommended Investment Strategy is not a guarantee of future results or trends.

Standard Deviation: A statistical measure of volatility indicates the "risk" associated with a return series. The lower the number the less volatility. **Returns are calculated gross (before the deduction) of advisory fees payable to Brinker Capital and any other expenses for services not covered by the advisory fee including administrative costs, which would reduce your return.** Brinker Capital's fee does not include the internal management fees and operating expenses of mutual funds in which a client's account is invested, which are reflected in the performance information contained herein. Brinker Capital's fees are disclosed in Part 2A of its Form ADV. The net effect of the deduction of Brinker Capital's fees on annualized performance, including the compounded effect over time, is determined by the relative size of the fee and the account's investment performance. The chart to the right depicts the effect of a 1% management fee on the growth of one dollar over a ten year period at 10% (9% after fees), 5% (4% after fees) and 3% (2% after fees) assumed rates of return. Looked at another way, \$10,000.00 invested at 10% for ten years would grow to \$25,937.42; at 9% it would grow to \$23,673.64.

As a strategist, Brinker Capital creates and updates a model portfolio utilizing various mutual funds, exchange traded funds or stocks and delivers the model portfolio to platforms for implementation. Your account may not contain certain securities due to their availability and substitute securities will be selected at Brinker Capital's discretion. All investments involve risk including loss of principal. Foreign securities involve additional risks, including foreign currency changes, political risks, foreign taxes, and different methods of accounting and financial reporting. Fixed income investments are subject to interest rate and credit risks. Alternative investment strategies are speculative, not suitable for all clients, and intended for experienced and sophisticated investors who are willing to bear the high economic risks of the investment. Mutual fund and exchange traded fund (ETF) performance information is based upon published performance of the mutual funds or ETFs, which must be calculated by the funds in accordance with rules and regulations promulgated by the Securities and Exchange Commission.

Indices: Figures for the indices reflect the reinvestment of dividends but do not reflect any management fees, transaction costs or expenses, which would reduce returns. Indices are unmanaged and an investor cannot invest directly in an index. **Russell 3000:** A market capitalization weighted equity index maintained by the Russell Investment Group that seeks to be a benchmark of the entire U.S. stock market. This index encompasses the 3,000 largest U.S.-traded stocks, in which the underlying companies are all incorporated in the U.S. **MSCI All Country World Index Ex USA:** A market-capitalization-weighted index maintained by MSCI Inc. and designed to provide a broad measure of stock performance throughout the world, with the exception of U.S.-based companies. The MSCI All Country World Index Ex-U.S. includes both developed and emerging markets. **Bloomberg Barclays U.S. Aggregate:** A market capitalization-weighted index, maintained by Bloomberg Barclays, and is often used to represent investment grade bonds being traded in United States. **HFRX Global Hedge Fund Index (USD):** An asset weighted index comprised of all eligible hedge fund strategies, designed to be representative of the overall composition of the hedge fund universe.

Aggressive Equity with Alts Taxable

December 31, 2016

Portfolio overview

- **Broad Asset Class Exposures:** Portfolio is diversified across multiple asset classes with a majority allocated to equities and a smaller allocation dedicated to alternatives.
- **Many Diverse Strategies:** The asset classes and sub-classes that comprise this Portfolio are primarily equities and focused on aggressive

Key statistics

Inception date	April 2009*
Number of holdings	22
Portfolio turnover (12 month)	56.60%
Yield	1.15%
Internal expense ratio	0.31%
Beta vs. S&P 500 (5 year)	0.86
Investment minimum	\$500,000

About Brinker Capital

Since 1987, our purpose has been to integrate the idea of diversification through multi-asset class investing with a disciplined investment approach. By continually enhancing and applying these principles, we strive to deliver better outcomes for investors.

Portfolio management team

Andrew Rosenberger, CFA, *Senior Investment Manager*

- 12 years industry experience
- B.S. Pennsylvania State University

*Inception date of portfolio with current investment mandate. Portfolio existed from April 2006 through April 2009 under different investment mandate. The holdings supplied are a complete list as of 12/31/2016. These may change prior to investment and are subject to change at any time. Allocations may not add to totals due to rounding of asset class and fund allocation percentages. Beta: A measure of a portfolio's sensitivity to market movements, measured against the S&P 500.
