

## Hoping for Some Bad News

Don't let the headline fool you - we are optimists at heart, always trying to find the positive in any situation. And it is hard, despite these challenging times, not to feel optimistic as we step back and consider that great American engine of wealth creation, Wall Street. There is its longevity (traders first gathered under a buttonwood tree in Lower Manhattan in 1792); the larger than life characters who have dominated the markets and made incredible fortunes (John Pierpont Morgan); the sheer scale of the markets (the market capitalization of all US listed companies is approximately \$42 trillion), and the language that is Wall Street's own ("bull market," "bear market," "sell in May and go away," "don't fight the Fed").

And that language is at the heart of this week's note, specifically that confusing, albeit timely Wall Street classic, "when good news is bad news," as it seems Wall Street might have gotten more good news about the economy last week than it wanted. Consider, last week investors received better-than-expected readings on the US consumer (Conference Board's Consumer Confidence Survey), manufacturing (Chicago PMI), services (Non-Manufacturing ISM Report), and the labor market (Nonfarm Payrolls Report For May). And another way to gauge the health of the labor market is last week's JOLTS report which showed "half a worker" available for every job opening (see graph). While the strong data points are welcome and should diminish talk of recession, they are a reminder the Federal Reserve has work to do to slow the economy and tamp down historically high inflation.

Which brings us back to our headline. It isn't so much that Wall Street is rooting for bad news, but rooting for economic news that is less good, if that makes sense, with the idea being that a clearly slowing (but still expanding) economy would allow the Fed to ease up on the rate hiking front just a bit. The better-than-expected economic news likely means the Fed will raise rates by 50bps at its June and July meetings, and that a 50bps hike is still on the table for its September meeting. We remain optimistic on the economy and the markets and believe the Fed can engineer a soft landing, but we aren't there just yet.

Week of 5/31/2022
• Chicago PMI SA May 60.3
• Consumer Confidence May 106.4

# Brinker Capital Market Barometer

MAY 2022

A strong labor market, wage growth, and healthy consumer balance sheets are boosting the US economy, although geopolitics, inflation, and Federal Reserve policy are taking center stage. Global markets have fallen back to year-to-date lows as interest rates continue their upward ascent. Expectations are high for the Federal Reserve to raise interest rates more than 0.25% during the May FOMC meeting. The conflict in Ukraine rages on, with related headlines contributing to price volatility across asset classes. The second quarter earnings season is in full swing, and early results are favorable. Company commentary around controlling costs and maintaining margins will be important to monitor throughout the season. A strong consumer bodes well for economic cycle durability, but we are watching to see if the persistence of inflation and geopolitical worries may curtail spending.

## SHORT-TERM FACTORS (< 6 months)

	CHANGE	NEGATIVE	NEUTRAL	POSITIVE	
Momentum	←	●			Market has returned to year-to-date lows, giving back the recent recovery
Trend	←	●			Index levels have dropped back below moving averages
Investor sentiment				●	Surveys show significantly more bears than bulls, a contrarian indicator
Seasonality	← ←	●			Markets are entering a period of seasonal weakness, particularly in a midterm election year

## INTERMEDIATE-TERM FACTORS (6-36 months)

	CHANGE	NEGATIVE	NEUTRAL	POSITIVE	
Fiscal policy			●		Fiscal drag a headwind in 2022; unlikely to see any major new fiscal spending
Monetary policy				●	Markets have tightened ahead of the Fed, but financial conditions are still accommodative
Inflation		●			Persistently high inflation may cause Fed to adjust timeline; weighing on sentiment
Interest rate environment			●		Rates remain historically low, but the effects of future rate hikes remain to be seen
Macroeconomic				●	Consumer balance sheets remain strong and the labor market remains healthy
Business sentiment				●	Business confidence measures declined from recent highs, but remain elevated
Consumer sentiment		●			Consumer sentiment is deteriorating as inflation persists
Corporate earnings				●	Broad-based strength in earnings, closely watching margin pressures and basing effects
Credit environment				●	Corporate credit spreads are widening but still at tight levels relative to history

## LONG-TERM FACTORS (36+ months)

	CHANGE	NEGATIVE	NEUTRAL	POSITIVE	
Valuation			●		Equity valuations have moved closer to long-term averages
Business cycle				●	In an economic expansion period with positive GDP growth since 3Q20
Demographics			●		Emerging markets with more favorable trends overall than developed markets

These statements are not guarantees of future performance and actual events may differ materially from those discussed. MSCI AC World ex US Growth: An index made up of approximately the top 50% of the MSCI AC World ex US Index as composite ranked by five growth rates. This is a common proxy used to represent the growth segment of the developed international market. MSCI EAFE Index: A market-capitalized weighted index representing developed international equity markets located in Europe, Australia, Asia and Far East (EAFE). S&P 500 Index: An index consisting of 500 stocks chosen for market size, liquidity and industry grouping, among other factors. The S&P 500 is designed to be a leading indicator of U.S. equities and is meant to reflect the risk/return characteristics of the large-cap universe. Companies included in the Index are selected by the S&P Index Committee, a team of analysts and economists at Standard & Poor's. Barclays US Aggregate Index: A market capitalization-weighted index, maintained by Barclays Capital, and is often used to represent investment grade bonds being traded in the US. MSCI Emerging Markets: a float-adjusted market capitalization index representing 13% of global market capitalization. Captures mid and large cap across more than two dozen emerging market countries. Brinker Capital Investments, LLC a registered investment advisor.
